# PRODUCT INFORMATION

# HIGHTEC OIL LEAK STOP / ÖL-LECK-STOPP

Engine oil additive. Regenerates old, hardened and brittle seals made of elastomer, plastic and rubber and allows these to become pliable again.

## **Description**

HIGHTEC OIL LEAK STOP / ÖL-LECK-STOPP regenerates seals made of elastomer, plastic and rubber and thus reduces oil consumption on seals from shaft seal rings, valve covers, valve shafts and other seals.

#### **Application**

HIGHTEC OIL LEAK STOP / ÖL-LECK-STOPP reduces oil consumption that arises from brittle and cracked seals in the engine. Add HIGHTEC OIL LEAK STOP / ÖL-LECK-STOPP to the engine oil after the oil change and warm up the engine. The sealing effect sets in after approximately 700 - 1,000 km. HIGHTEC OIL LEAK STOP / ÖL-LECK-STOPP should be added on a regular basis after every oil change to reduce the oil loss in the long term.

### **Advantages**

- Reduction of blue gas in exhaust gas
- Regeneration and maintenance of elastomer, plastic and rubber seals
- · Prevention of oil stains in garages, entrances and on the street
- Reduction in the oil consumption of petrol and diesel engines, thus playing a role in protecting the environment
- Suitable for turbocharged engines, catalytic converters and diesel particulate filters
- · Avoidance of expensive repairs
- No disassembly work
- Engine noise reduction
- Compatibility with all commercially available mineral-based and synthetic engine oils

#### **Notes**

- HIGHTEC OIL LEAK STOP / ÖL-LECK-STOPP cannot fix mechanical damage. It is not suitable for use in motorcycles with wet-running oil bath clutches.
- Dosing
- One dose (250 ml) is sufficient for 3-5 litres of engine oil
